Run The Application

- Open the anaconda prompt from the start menu.
- Navigate to the folder where your app.py resides.
- Now type the "python app.py" command.
- It will show the local host where your app is running on http://127.0.0.1.5000/
- Copy that localhost URL and open that URL in the browser. It does navigate to where you can view your web page.
- Enter the values, click on the predict button and see the result/prediction on the web page.

(base) C:\Users\DELL>cd C:\Users\DELL\Desktop\Desk Files\Nutrition Analysis Using Image Classification\Flask (base) C:\Users\DELL\Desktop\Desk Files\Nutrition Analysis Using Image Classification\Flask>python app.py

- Then it will run on localhost:5000
 - * Serving Flask app "app" (lazy loading)* Environment: production
 - WARNING: This is a development server. Do not use it in a production deployment
 - Use a production WSGI server instead.
 * Debug mode: off
 - * Running on http://127.0.0.1:5000/ (Press CTRL+C to quit)

Navigate to the localhost (http://127.0.0.1:5000/) where you can view your web page.

Click on classify button to see the results.
